

# Easy does it

Keep compressors  
on a low pressure  
and don't overuse

Air is free... but only until it is compressed!  
Compressed air is the most expensive essential  
utility on a site, costing more than electricity,  
gas or water. You can save up to 30% of the  
energy used by air compressors by using them  
less, maintaining them diligently and controlling  
how they are used.

**Could you use your air compressors  
more efficiently?**
