

Handle with care

Keep your burner
in good condition

Your asphalt dryer burner emits more CO₂ than any other piece of equipment, so care for it – give it the right amount of air, repair holes in the dryer and ductwork, measure oxygen and carbon monoxide levels in the stack, and service it regularly. Keep your burner in optimum condition and it will reward you by using up to 10% less energy.

How well cared for is your dryer burner?

Making business sense
of climate change
