

Get on your soapbox

Share your energy saving ideas

Your thoughts make us more energy efficient. When the next production run starts in an hour and you decide to switch off a piece of equipment or do some maintenance; when you have an idea about how to fix a process that keeps someone waiting or a machine running unnecessarily; when you talk to a supplier about how to keep our materials dry... your thinking makes a difference. Share your ideas, make sure someone knows, the more we think energy the more we save energy.

What else can you do to save energy on-site?
